DETAILED ACTION

Acknowledgment

1. This Office Action is responsive to the Amendment filed on 12/11/2007.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

4. Claims 1, 14, 16, 17, and 19-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tong et al (US 6,337,658; art of record) in view of Lindenmeier et al (US 6,574,460) or Meredith et al (US 6,052,605).

Regarding claims 1, 14, 16, 17, and 19-21, Tong, as shown in figures 1, 3, 4 and 6, teaches a method and apparatus for controlling a directional antenna to

receive a plurality of signals from plurality of directions wherein the preferred direction of the directional antenna is selected based on the parameters of signal strengths and frequency spectra. Tong fails to teach using a plurality of antennas for receiving the signals. See also column 1, lines 11-19; column 2, line 45 to column 3, line 39; column 4, lines 39-65; column 5, line 38 to column 6, line 56.

However, Lindenmeier or Meredith, from the same field of endeavor, discloses receiver having a plurality of antennas for receiving the radio signals to provide diversity and improve signal reception. See Lindenmeier: figures 1, 2 and 4a and column 1, lines 48-52 and Meredith: figures 1-3 and column 2, lines 1-67. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the system of Tong by employing the plurality antennas for communications as taught by Lindenmeier or Meredith so that to provide diversity to the system and thus, improving the signal reception.

Allowable Subject Matter

5. Claims 3-13, 15, 18, and 23-25 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

6. Applicant's arguments with respect to claims 1, 14, 16, 17 and 19-21 have been considered but are moot in view of the new ground(s) of rejection.
